

DATA DESTRUCTION SERVICES

ON-SITE HARD DRIVE AND MEDIA SHREDDING:

The most cost-effective and absolute solution for the shredding of hard drives, tapes and e-media. We capture and verify the serial number of each item and shred them down to 1.2 centimeters at the customers site.

ON-SITE HARD DRIVE ERASURE:

Our Mobile IT Lab arrives on-site and performs hard drive erasure to any level of DoD specs, whether the drives are loose or still in the computer, insuring absolute data eradication before returning them to a leasing company or moving them off-site for disposal.

ON-SITE ENTERPRISE DATA ERASURE:

A non-intrusive, on-site solution for the absolute erasure of data on all formats of hard drives and within any type of storage array including entire frames in data centers. Includes capturing the host device serial number and individual hard drive serial numbers.

ON-SITE HARD DRIVE DEGAUSSING:

When Government security protocols mandate degaussing, we can deliver NSA-approved or commercial degaussing devices for both hard drives and tapes, complete with a Certificate of Data Destruction.

E-WASTE RECYCLING PROGRAMS:

Eco Guardian insures our "Zero Landfill Policy" and makes sure e-waste does not become a problem for you or your client. We will coordinate the remarketing of any of your resalable equipment.
